

Banamba Medjo Ulrich Pascal

Web Developer · Digital Advertising & Technical SEO

Yaoundé, Cameroon · banambamedjoulrichpascal@gmail.com · +237 683 499 422 · ulrich-pascal-portfolio.onrender.com
github.com/BANAMBA-MEDJO-ULRICH-PASCAL

Web developer with a computer science foundation from the University of Yaoundé I and self-taught expertise in modern web languages, technical SEO and digital advertising. I build the thing and bring people to it — from hand-coded multi-page sites and full-stack applications to the paid search and SEO work that makes them findable.

EDUCATION

Bachelor's degree in Computer Science

Expected 2026

University of Yaoundé I — Yaoundé, Cameroon

The first year was built around C. The web languages, Java and Python I learned independently alongside the curriculum.

Self-directed training

Ongoing

W3Schools · MDN Web Docs · Google Skillshop · online courses

Front-end languages, then the advertising and technical SEO side, learned through documentation, structured courses and certification tracks.

CERTIFICATIONS

- Google Ads Search Certification — Google
- Google Ads Measurement Certification — Google
- Google Analytics Certification — Google

SKILLS

Development	HTML · CSS · JavaScript · TypeScript · Python · Java · React · Astro · WordPress · Git
Marketing	Google Ads · Meta Ads · Google Analytics · Tag Manager · Technical SEO · Conversion tracking
Security & tooling	Linux · File integrity monitoring · Code review · AI tooling

SELECTED PROJECTS

Afiri — student and employer platform

Team of 21 · business, finance, market and HR lead; back-end pole; admin dashboard

Two-sided platform connecting Cameroonian students to internships and local employers: filtered listings, a shareable mini-CV and a careers quiz built around Cameroonian degree programmes. I built the admin analytics dashboard end to end — five live KPI counters, two Chart.js visualisations and a 30-second auto-refresh, with role checks on every analytics endpoint.

Python · FastAPI · SQLAlchemy · PostgreSQL · JWT · Chart.js · Render

CAMRAIL traffic planning simulator

Solo — modelling, algorithms, API and interface

Railway timetable simulator for Cameroon's single-track network. Detects eight distinct conflict types automatically, computes a conflict-free plan by reducing scheduling to graph colouring, and recalculates the whole timetable when an incident is injected.

Python · FastAPI · Welsh–Powell & DSATUR · Leaflet · JavaScript

AI Enterprise Assistant

Solo — architecture, implementation, tests and CI

Multi-tenant FastAPI backend for a document assistant businesses can trust: one vector collection per organisation so isolation is structural, plus a governance layer covering audit logs, usage quotas, rate limits and prompt-injection guardrails.

Python · FastAPI · PostgreSQL · ChromaDB · Docker · pytest · GitHub Actions

Jackbeat — archive of Cameroonian music

Solo — data model, application, moderation and dashboard

Crowdsourced archive covering 14 genres, 11 regions and 11 languages, with a moderation pipeline on every public submission and an analysis layer of maps, charts and PDF report export.

Python · Flask · PostgreSQL · pandas · Plotly · ReportLab · Render

Paid search on an \$8.48 budget

Solo — strategy, build, measurement

A Google Ads search campaign run end to end on a deliberately small budget: keyword strategy, ad groups, conversion tracking and the reporting that shows what the spend actually bought.

Google Ads · Google Analytics · Conversion tracking

MyTech — corporate website

Solo — design, markup, styling and interaction

Twelve-page corporate site hand-coded with no framework and no build step, built on a CSS design-token system with reusable header and footer partials. Front end complete; backend still to come.

HTML · CSS · JavaScript · Intersection Observer · localStorage

Scientific calculator

Team of 2 — console interface, Swing interface, exception layer

Twenty-seven operations behind two independent interfaces, with a dedicated exception type exposing a named factory per mathematical failure so every edge case reports itself precisely.

Java 17 · Swing · FlatLaf · JUnit

LANGUAGES

English — fluent · French — fluent
